JAHIN TAZWAR

Full-Stack Web Developer · React, TypeScript, Node.js

Chittagong, Bangladesh | +880 1318 375497 | tazwarjahin@gmail.com | jahintazwar.netlify.app | github.com/Jahin-Tazwar | linkedin.com/in/jahin-tazwar

SUMMARY

Computer Science undergraduate at CUET who builds and ships full-stack web apps in React and TypeScript. Seven projects deployed and live, including an AI banking assistant with a tested Express API built for the WeBank FinTechathon, a multi-tenant SaaS on Supabase with row-level security, and a nine-experiment physics lab platform. Comfortable from database schema to deployed UI, with a systems background (a programming language written in C and compiled to WebAssembly). Available for part-time work.

TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript, Vite, Tailwind CSS, HTML/CSS, TanStack Query, Zustand, shadcn/ui

Backend & Data: Node.js, Express, REST APIs, Zod, Python (FastAPI), PostgreSQL, Supabase (Auth, Row-Level Security, Storage), MongoDB, SQLite

Testing & Deployment: Vitest, Supertest, pytest, Docker, Netlify, Render, Git/GitHub, Linux

Also: C, C++17, WebAssembly (Emscripten), CMake, LLM APIs (Gemini, Groq), data structures & algorithms

PROJECTS

MoneyWise — AI Money Assistant · WeBank FinTechathon 2026, International Track moneywise-ffhs.onrender.com

TypeScript, React, Vite, Node.js, Express, Zod, Vitest

- Wrote most of the code for a hackathon team: an assistant that pays bills, saves toward goals and cancels unused subscriptions, but only within rules the user signs. The AI proposes, plain code decides, and the user's PIN approves.
- Built the Express API in a TypeScript monorepo with Zod validation, per-user access checks, PIN lockout and a hash-chained audit log; blocks payment instructions hidden in uploaded bill PDFs. Covered by 18 Vitest/Supertest test suites.

HishabAI — SaaS for Chartered Accountancy Firms github.com/Jahin-Tazwar/Hishab-AI

React, TypeScript, Tailwind, shadcn/ui, Python, FastAPI, Supabase (PostgreSQL)

- Built a multi-tenant app for Bangladeshi CA firms covering VAT reconciliation, compliance deadline tracking and NBR notice drafting, with Excel export.
- Isolated each firm's data with PostgreSQL row-level security across 13 SQL migrations; the frontend reads Supabase directly and calls FastAPI for heavy reconciliation work. 28 test files across pytest and Vitest.

CUET Virtual Lab — Interactive Physics Lab Platform cuet-lab.netlify.app

React, TypeScript, KaTeX, Recharts

- Built nine browser experiments for CUET's first-year physics course, each with its own simulation engine (oscilloscope, spectrometer, pendulum) rather than canned animations.
- Observation tables calculate results live and draw graphs with % error against accepted values; navigation is generated from structured data, so adding an experiment needs no new code.

GridWise LLM — Energy Scheduling API · BUP CSE Fest 2026 github.com/Jahin-Tazwar/Innovex

Python, FastAPI, Pydantic, Docker, LLM APIs

- Built most of a team's HTTP service that turns plain-English campus operator notes into checked directives and returns a cost-minimal 24-hour energy schedule; deterministic guardrails rebuild every LLM output before it reaches the optimizer. Deployed on Render with a published Docker image.

Repo Explainer — AI Codebase Analysis Tool repodecode.netlify.app

React, TypeScript, Tailwind, Express, Gemini API

- Takes any public GitHub repository and generates a structured explanation of its architecture, module layout and functionality, with a React frontend and a separate Express backend.

NFA — Programming Language & Interpreter nfa-lang.netlify.app

C, WebAssembly (Emscripten), TypeScript

- Wrote a language from scratch in C (hand-written lexer, recursive-descent parser, AST, tree-walking evaluator, block scoping), compiled to WebAssembly so it runs in a browser REPL with no server.

Also built: NFA's Gambit, a C++17 chess engine with alpha-beta search, playable in the browser via WebAssembly (nfa-gambit.netlify.app); AI Math Notes, a handwriting math solver (ai-math-notes.netlify.app).

EDUCATION

Chittagong University of Engineering & Technology (CUET) — B.Sc. in Computer Science & Engineering *Expected 2030*

Government City College, Chittagong — Higher Secondary Certificate (HSC), GPA 5.00 / 5.00 *2025*

Chittagong Government High School — Secondary School Certificate (SSC), GPA 5.00 / 5.00 *2023*

ACHIEVEMENTS & LANGUAGES

- CodeChef rating 1415; practises algorithmic problem solving regularly.
- Competed in the WeBank FinTechathon 2026 (International Track), BUP CSE Fest 2026 and the BUILD@CUET speedathon.
- Languages: Bengali (Native), English (Professional Working Proficiency).
